

# Hepatitis B testing & follow up with Chinese & Vietnamese Communities

## Purpose

Share the findings from this community-based research project, including:

- Results of the hepatitis B pilot and clinical audit in primary care (to trial a culturally responsive model for hepatitis B screening, vaccination and care), and
- Explore the challenges, innovations and recommendations.

## Audience

- Culturally and linguistically diverse (CALD) communities
- Bi-lingual community workers (BLCW)
- Community members, particularly from Vietnamese, Chinese or other higher endemic countries
- Staff from migrant health, primary care, or working in the blood-borne virus space
- Staff from partner organisations
