

Bowel and Breast Cancer Screening

Demo Practice

23 April 2025 09:55

Which patients are included in this report?

What data is in this report?

How do we use this report?

What are ACG patient complexity levels?

Which patients are included in this report?

- Patients 50 to 74 years without evidence of bowel and or breast cancer screening completed in the past 2 years - noting not all screening data may be sent to the GP. Patients with related interventions e.g colonoscopy are not included as they are likely already known to the GP
- Patients recorded as 'active' in the practice software

What data is in this report?

- Age of patients - to protect patient confidentiality, the age of all patients older than 90 years are displayed as 90
- Gender

How do we use this report?

- This report identifies patients that may be eligible for cancer screening - noting this is a nationally provided service that practices may not have accurate data on
- The results can be filtered by clicking on each column. Clicking on columns will rearrange the results alphabetically, chronologically or from high to low or low to high
- If measures have been recorded, the corresponding spaces in the report have been left blank. Where the measure is missing N or the description of the missing measure is provided
- The 'Search' function can help you find specific content
- The 'Existing appt' column displays patient appointments that have been booked for dates beyond the report
- The 'Remove' column provides the option to selectively remove individual patients from this type of report for the next twelve months.
- The report can be exported as an Excel or CVS file by clicking the 'Export To Excel' or 'Export to CSV' tabs
- All reports that are generated are automatically saved to a folder on your practice computer.
- The report can be printed by clicking the right mouse button while hovering the cursor over the report and selecting the 'print' option.

What are ACG patient complexity levels?

- There are six complexity levels, ranging from 0-5
- Level 1 indicates a very low level of complexity with no known risks for poor health outcomes, while level 5 is the highest complexity. Patients with level 5 complexity typically have significant multi-morbidity and polypharmacy and are at greatest risk of poor health outcomes.
 - Level 5: High complexity, characterized by instability, multimorbidity, polypharmacy or patients requiring end-of-life care
 - Level 4: High to moderate complexity, characterized by multimorbidity
 - Level 3: Moderate complexity. Patients typically have at least 1 chronic condition and are at risk of progressive deterioration.
 - Level 2: Low to moderate complexity. Patients typically have one risk factor
 - Level 1: Low complexity. Patients are generally healthy and only present because of acute, time-limited conditions or minor issues.
 - Level 0: no or only invalid diagnosis
- Patients with higher levels of complexity are more likely to be hospitalized than those with lower levels. However, complexity is not directly related to the risk of being hospitalized. Many Primary Sense reports therefore includes both estimates.
- If the complexity of a patient is calculated from results that are more than 12 months old, the level will be displayed in brackets, e.g. (3), rather than 3.
- If there is insufficient information to calculate a complexity level, the result will be displayed as 'N/A'
- The complexity levels of patients in this report were calculated with the Johns Hopkins ACG tool. The ACG is underpinned by a robust evidence base of >30 years of practical application. The tool is used in 20 countries and has been validated in different healthcare settings, including general practice.

Male patients eligible for bowel cancer screening

N/A means not recorded

Information about this table

- Excludes patients with a colonoscopy in the past 2 years, bowel cancer, and colostomy
- Includes risk factors from your data. N/A means not recorded. Alcohol use is how the practice software describes it or the AUDITC. N/A means not recorded
