

Primary Sense Reports – Cervical Cancer Screening

New report - release 2.35

Overview

The Cervical Cancer Screening report was made available in the January Release V2.35 (31 January). The report was funded by C2CPHN. The report displays patient data to facilitate identifying patients who may be due for a cervical screen. The report looks for evidence of cervical screening testing recorded in the pathology request, as a reason for the visit, and from the results coming back to the practice. The report follows recommendations listed in:

[Who should get a Cervical Screening Test | Australian Government Department of Health and Aged Care](#)

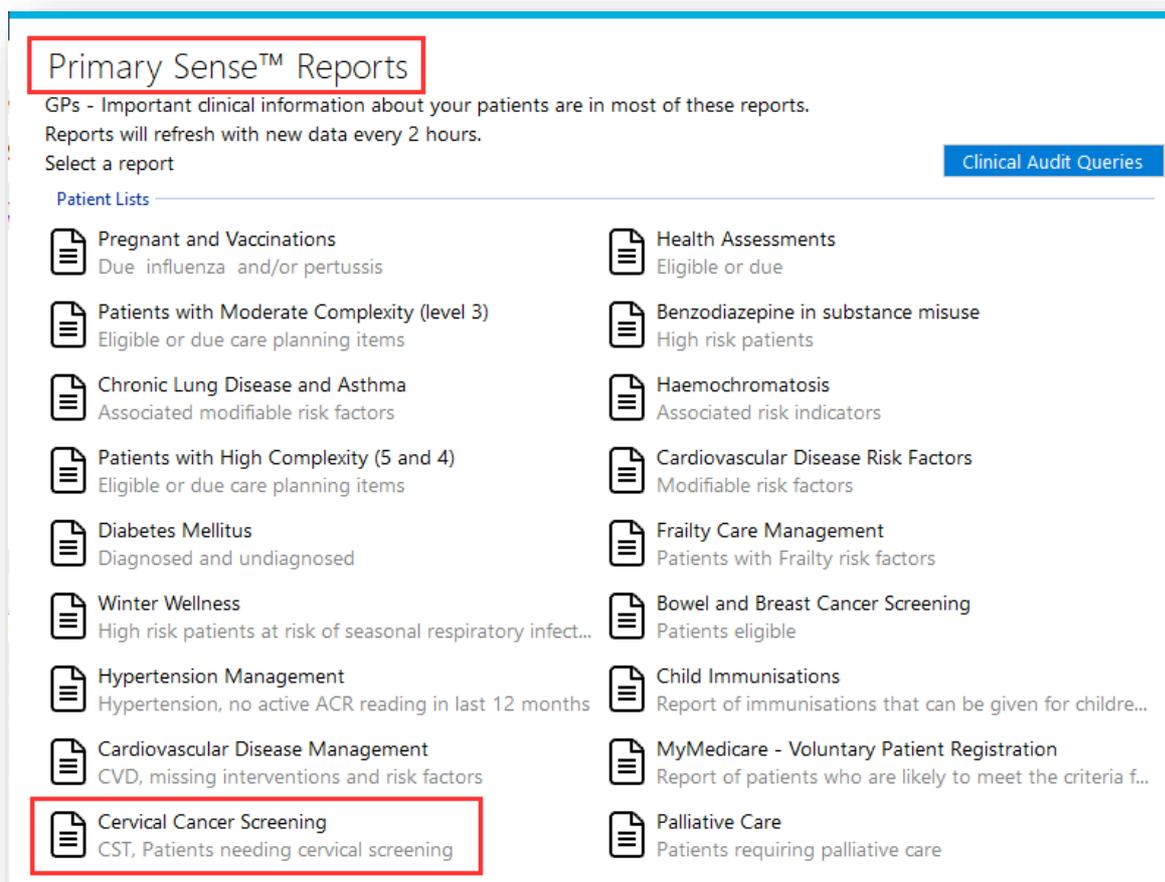

Clinicians should also refer to [Home | National Cancer Screening Register](#) as patients may have completed screening at another clinic.

Using the report

To open the report, click on the 'Reports' tile in the desktop app.

Double click Cervical Cancer Screening report under the 'Patient Lists' section.

General Information

- The tabs at the top of the page can be clicked to bring up relevant information.

Which patients are included in this report?

What data is in this report?

How do we use this report?

- The results can be filtered by clicking on each column. Clicking on columns will rearrange the results alphabetically, chronologically or from high to low or low to high.
- The 'Search' function can help you find specific content

Try searching by a month or year e.g. '08' or '2023' to find a last visit dates in a particular range, or by 'GP Name' to bring up patients with a specific regular GP.

- Patients can be removed from the report for 12 months, by clicking 'Remove.' This action cannot be reversed.
- The table can be exported to Excel or CSV for further analysis. 'Export To CSV (SMS)' will create a patient recall list for use with HotDoc© or other compatible applications.

Patients Due Cervical Screen Testing

Information about this table

Patients have been sorted by the most recent visit day, then by youngest to oldest. This is to target younger women into the program, and to indicate who may be actually attending your practice. You can use the tabs at the top of each column to reverse the ordering

Show
25 patients per page

Export To Excel Export To CSV Export To CSV (SMS)

- Any filters applied to the data at the time, will be carried over when exported.
- All reports that are generated are automatically saved to a folder on your practice computer.
- The report can be printed by clicking the right mouse button while hovering the cursor over the report and selecting the 'Print' option.

Which patients are included in this report? What data is in this report? How do we use this report?

Which patients are included in this report?

- Women marked as 'active' in the practice aged 25 to 74 yrs old who haven't had cervical screening in the past 5 years. Where available the date of the last screening is provided.
- The report synopsis shows the number of women due screening (those in the report), and those who are eligible and been screened within the past 5 years.
- It provides a count of those who have done the self-collect method (where data is available), and a count of patients where a HPV vaccination was found.
- There is also a count of those opted out/ineligible. Where a total hysterectomy is recorded, these patients are counted as 'ineligible' in the report synopsis
- Please note 'no longer required' as an opt out is available from June 2024 on wards. To keep patients off the report prior to this date, please select opt out instead (you can set it back to no longer required once saved in the record)

What data is in this report?

Evidence of cervical screening testing recorded in the pathology request, as a reason for the visit, and from the results coming back to the practice.

How do we use this report?

- The report can be used to identify patients with gaps in care.
- The results can be filtered by clicking on each column. Clicking on columns will rearrange the results alphabetically, chronologically or from high to low
- The 'Search' function can help you find specific content
- The 'Existing appt' column displays patient appointments that have been booked for dates beyond the report
- The 'Last Visit' column displays the date the patient last had an appointment at the practice

What data is in this report?

What data is in this report?

Evidence of cervical screening testing recorded in the pathology request, as a reason for the visit, and from the results coming back to the practice.

Patients included in the report are those active in the Clinical Information System (CIS). The RACGP 'Active' definition does not apply to this report.

Cervical screening codes referenced are from the table Ref.ICPCCode with a ICPCClassificationID of 25 (Cervical Screening).

Cervical screening investigation codes are from table ref.investigation where SecondaryCategory is 22 (PAP test).

HPV vaccination codes are from the table ref.Immunisation where ImmunisationClassificationID is 26 (HPV).

Patients have been sorted by the most recent visit day, then by youngest to oldest. This is to target younger women into the program, and to indicate who may be attending your practice.

You can use the tabs at the top of each column to reverse the ordering.

1. Patients can be removed from the report for 12 months, by clicking 'remove.' This action cannot be reversed.
2. Patient demographic data.
3. The 'Last Visit' column displays the date the patient last had an appointment at the practice.
4. The 'Existing appt' column displays patient appointments that have been booked for dates beyond the report.
5. 'GP Name' shows the GP who has most accessed the patient record.
6. 'Clinic' displays most attended clinic if data is shared.
7. Patient age at time the report is run.
8. 'CST date later than 5 years' indicates that over 5 years has passed since the last recorded screening date (noting data only goes back 5 years on initial extract so will likely be blank until clinics have been on Primary Sense for over 5 years)

Report Synopsis

- Patients meeting all criteria and requiring a screening.
- Patients with Recent Screening – within the last 5 years.
- Patients with self-collected tests are included in the report (Recorded as Self Collected in the CIS Cervical Screening pathology request form). **NOTE:** Self-collected in Best Practice will not show in the report until the result has been received.

- Number of women where at least one HPV vaccination is found.
- Patients who have opted out of screening in the CIS or where a total hysterectomy is recorded, these patients are counted as 'ineligible' in the report synopsis.
